## Inexpensive Tailoring

In plainer language, all wool suits made to your measure at \$15, \$20 and \$25—you save from \$10 to \$25.

Our connections with the large woolen weavers keep their looms warm spinning woolens for our nineteen stores—A trained force of expert tailors make our garments—one executive department controls this chain of stores—not one intermediate expense or profit—this explains the secret of our low prices. If we fail in our claims the clothes won't cost you one cent.

**Extra Trousers Free**

with Each Suiting or Overcoating for a short time

For \$15 you may take your choice from our extensive assortment of all woolen weaves and patterns. The styles are the newest spring and summer creations. Made to your measure at a saving of \$10.

For \$20 you may wear these fine worsteds characteristic of business and professional men, measured to fit you perfectly and comfortably. Your ideal of patterns and weaves are waiting here. You may have twice as many clothes in a season for the same money you pay other tailors or ready-made clothiers—providing we make your clothes.

For \$25 you may dress in the fine "woolens," tailored to your measure. Brains are put into these clothes—thought—study—love for harmony and correct matching of fabrics and linings. The springiest and sunniest weaves and patterns. The finest suit possible to produce. None better at \$40 or more. You may dress as well as your taste dictates or your social or business position demands and yet not be extravagant—providing you wear our \$25 suits.

Extra Trousers Free with Each Suiting for a short time  
No Delays—Quickest Tailoring Service.

FINE JOB PRINTING AT THIS OFFICE.

A large deposit of manganese ore has been discovered in the Australian States of Victoria. The lode is about 7 miles long by 400 feet wide, and has been proved to a depth of 70 feet.

The use of rat skins in a various industry has created a demand in London alone amounting to nearly \$200,000 a year. Among other things, they are used for the thumbs of women's gloves. Carbide dioxide may be liquefied at a pressure of a ton to the square inch. Liberated at a low temperature it crystallizes into a snow that is said to be a cure for certain skin diseases.

The prize offered by the University of Jena for the best essay on the condition of the interior of the earth was awarded to a writer who argued that its density was about that of steel.

A French chemist claims to have succeeded in obtaining an oil from the residuum left by turpentine manufacturers which has the same chemical properties and composition as the natural oil.

More than 20 snow gauging stations have been erected in Colorado by the Weather Bureau with a view to forecasting the amount of water the rivers will receive each year after the snow melts.

France produced 37,622,556 tons of coal last year, an increase over 1907 of 86,929 tons, and smelted 3,413,303 tons of iron from native ores, a decrease of 177,842 tons from the year before.

In a new type of field gun adopted for the German army, the wheels swing together under the barrel and lock, giving greater stability when fired and furnishing more room for the soldiers handling it.

To make the gathering of a swarm of bees less hazardous than usual, an Ohio man has patented a funnel shaped affair which may be placed about a swarm and closed without any of the bees escaping.

For ten years after he is licensed to practice, a Japanese physician is required to keep books showing the names, ages and addresses of patients, their diseases and the treatment given them.

By administering subcutaneous injections of tuberculin to the monkeys at the Philadelphia Zoological Garden, the officials have not in 13 months lost one from consumption, to which disease Simians are much subject.

To dry shoes in hotels, clubs and other places where they accumulate in numbers, there has been devised a cylinder with a gas burner at the base, from which radiate a number of tubes on which the shoes are hung to receive uniform heat.

Previous to 1875 there was not a coconut tree in Florida. In that year some nuts that washed ashore from a wreck were planted, with the result that the shores of Lake Worth and Biscayne Bay now are lined with profitable groves.

Each female oyster lays from 16,000,000 to 60,000,000 eggs a year, of which only about one in each 2,000,000 reaches maturity, according to Dr. Charles R. Bacon, president of the National Association of Shell Fish Commissioners.

The first person other than a Peruvian to visit Choquequirau, the "Lost City of the Incas," in over 400 years, Dr. Frank M. Davis, of Yale University, recently returned to this country with a glowing account of a trip unimpeded by almost insurmountable difficulties.

With a view to lessening the destruction of crops by locusts this year the Turkish Government required every rural resident of Northern Syria to deliver to a commission at least 55 pounds of eggs deposited by the insects of last year, and 630,000 pounds of eggs were thus destroyed.

If you want to feel well, look well and be well, take Foley's Kidney Remedy. It tones up the kidneys and bladder, purifies the blood and restores health and strength. Pleasant to take and contains no harmful drugs. Why not commence to-day? F. B. Brill, local agent. \*135

### FISHY FLAVOR IN BUTTER.

(From the Bureau of Animal Industry, United States Department of Agriculture.)

Buttermakers in general have long suffered heavy loss from fishy flavor, a well-known depreciating factor in the butter trade of different countries. It is not uniformly present, but occurs more frequently in some countries than in others. For example, it is much more common in butter from Australia than in the Danish product. In the United States it is prevalent in certain sections of the country, especially in the newer dairy localities, and one such region is known to commission men as the "fishy belt." The cause of this trouble has been a mystery and butter experts have been at a loss to account for its appearance, although many theories have been advanced. Since 1905 the Dairy Division of the Bureau of Animal Industry has been working on the problem, and its investigations have just been reported by L. A. Rogers, who sets forth his findings in Circular 146, which may be obtained on application to the Bureau of Animal Industry, Washington, D. C. It is believed that his conclusions regarding the cause and prevention of the trouble will be of practical value to buttermakers.

Of the undesirable flavors of butter the various oily flavors may be classed as the most objectionable and troublesome. They range from a slight suggestion of oil to a strong flavor of machine oil. In the latter case the inferior quality of the butter becomes evident even to the indifferent consumer. Fishy flavor, which is one of the most common of the oily flavors, gives to butter a peculiar oily taste suggesting mackerel or salmon. Butter is frequently described as fishy which is merely oily or otherwise off flavor, but the typical flavor of fishy butter is never mistaken for any other.

While many things connected with the butter-making industry have been ascribed as the cause, Mr. Rogers is of the opinion that fishy flavor is not produced by the action of any one factor, but so far as he has been able to ascertain the immediate cause is a particular substance produced by the oxidation of one of the combinations of the acid developed in the ripening of the cream. In other words, it is caused by a slow, spontaneous, chemical change to which acid is essential and which is favored by the presence of small amounts of oxygen.

It has been a generally accepted theory among buttermakers that sour cream made the best butter. This idea is reversed by the investigations, which bring forth the conclusion that butter made from sweet cream does not contain the elements that go to make fishy flavor.

In all the experimental butter made in the last three years there has been no trace of fishy flavor in that made from pasteurized sweet cream churned without the addition of a starter. In butter made from pasteurized cream with starter added but without any subsequent ripening there had been no fishy flavor, with one or two doubtful exceptions. On the other hand, many lots of experimental butter made from well ripened cream developed marked fishiness.

It is evident, therefore, that there is a direct relation between the acidity of cream and the development of fishy flavor in the butter. However, as the work progressed it became apparent that the acidity, although having a determining influence on fishy flavor, was the sole cause. With this factor controlled it was impossible to make butter with any certainty that it would become fishy. Frequently butter made from cream with a high acidity showed no trace of fishy flavor.

It was found that overworking the butter increased the tendency to fishiness, and this flavor could be pro-

duced with reasonable certainty by overworking high-acid butter. All butter contains considerable quantities of air, and this is increased by the working, thus producing conditions more favorable to oxidations.

Fishy flavor may be prevented with certainty, says Mr. Rogers, by making butter from pasteurized cream without ripening. The addition of a starter to pasteurized sweet cream without subsequent ripening improves the flavor of the fresh butter without adding enough acid to cause fishiness. Pasteurization of sour cream will not prevent the development of fishy flavor.

## THE SURPRISE STORE

1119-1123 MAIN STREET, BRIDGEPORT.

SURPRISE SPECIAL SALE NO. 489
